

PRACTICAL 1

Problem 1 – Bakery

- Understanding what **rotation** means.
- Moving the first element to the last.
- Understanding $h \% n$ when h is very large.
- Keeping the array elements in the correct order.

Problem 2 – Library

- Finding which book IDs are repeated.
- Counting how many times an ID occurs.
- Avoiding printing the same ID again.
- Understanding **nested loops**.

Problem 3 – Longest Word

- Reading words from a sentence.
- Finding the length of each word.
- Comparing word lengths.
- Deciding what to do when two words have the same length.

PRACTICAL 2

Problem 1:

The main difficulty is understanding how to search one by one and how recursion works.

Problem 2:

The main difficulty is understanding low, high, and mid, and remembering that the list must be sorted.
